

## Downloading and Using Our CorelDRAW Design Templates

Step 1: Click on the CDR icon associated with the product of your choice. Choose CorelDRAW as the application to open the file. Click ok.

Step 2: The template file should open up in CorelDraw. Choose File -> Import to select the image file you wish to subliminate onto the product. Once you choose the file, click anywhere on your artboard to import the image. With your image selected, choose Effects -> Power Clip -> Place Inside Container. Your cursor will turn into a bold, black arrow. Move the arrow over the template shape and click. This will put your image within the printable area of the product.

Step 3: To adjust the size and placement of your image, choose Effects -> Power Clip -> Edit Contents. Once you are finished adjusting your image choose Effects -> Power Clip -> Finishing Editing at This Level.

Step 4: After your image is sized and adjusted to your liking, don't forget to delete all layers that contain instructions or guidelines...accept in the case that the guidelines are there as a cutting guide. No sense in wasting that precious ink or paper.

\*Please note that these instructions will work for most, but not all CDR templates, ie. ornaments. For these few items place the image layer below the template layer and size accordingly.
